PHP Engineering Backend Architecture Laravel WordPress API Development

Senior PHP Engineer with 9+ years of experience building and modernising backend applications and software products. Experienced in software architecture, legacy system refactoring, API development, and performance optimisation across PHP, Laravel, Symfony, and WordPress. I combine hands-on engineering with architectural thinking to build modular, testable, and maintainable systems.

Combining hands-on engineering with architectural thinking, I focus on building modular, testable, and maintainable systems. My work spans commercial platforms, internal management systems, custom CMS solutions, and independent developer tools.

Key Highlights:

- Led backend architecture and API development for ICR, supporting travel agency workflows and partner integrations.
- Re-engineered legacy systems into modular, maintainable architectures using modern PHP practices.
- Introduced automated testing, refactoring, and static analysis to improve software quality and maintainability.
- Achieved performance improvements of up to 8× in critical backend operations.

Currently open to:

- Senior PHP Engineer and Backend Engineering roles
- Freelance PHP and backend development projects

Languages:

- Persian – Native
- English – Upper-intermediate (B2)
- Portuguese – Elementary (A1)
- Turkish – Basic

Core Expertise

- **Backend Engineering:** PHP · Laravel · RESTful APIs · Object-Oriented Programming · Server-Side Development
- **Software Architecture:** Architectural Design · Design Patterns · SOLID Principles · Modular Architecture · Separation of Concerns
- **Software Design & Engineering:** Abstraction · Reusable Components · Refactoring · Code Maintainability · Technical Problem-Solving
- **Data & Integration:** Database Design · Data Modelling · API Integration
- **Quality & Reliability:** Unit Testing · Debugging · Error Handling · Static Analysis · Code Quality
- **Product Engineering:** WordPress Development · Plugin Architecture · Developer Tools · Software Product Development

Selected Projects

Numerus

An independent PHP extension project focused on reusable mathematical, statistical, and fuzzy logic operations.

Highlights:

- Flexible data storage strategies
- Lazy transformations
- Matrix operations
- Probability and statistical operations
- Iterative optimisation algorithms

Technology stack:

C · Zend Engine API

EphpicMan Test Suite

A WordPress plugin providing a lightweight testing infrastructure for WordPress developers.

Highlights:

- Built-in unit testing infrastructure
- Automated test execution within WordPress
- Developer-focused testing utilities

Technology stack:

PHP · WordPress Plugin API

RayaPress CMS

A legacy content management system re-engineered using Symfony, with a modular architecture and modern software engineering practices.

Highlights:

- Re-engineered legacy code into a modular Symfony application.
- Achieved over 90% test coverage across the backend codebase.
- Introduced static analysis using Psalm.
- Modernised legacy jQuery components.

Technology stack:

PHP · Symfony · MySQL · Psalm · PHPUnit

ICR Car Rental API

A RESTful API for car rental operations, developed using Laravel.

Highlights:

- Refactored backend components using established design patterns.
- Achieved over 90% test coverage across newly developed code.

Technology stack:

PHP · Laravel · MySQL

TopMart API

An e-commerce API built on the RayaPars API infrastructure, providing backend functionality for online retail operations.

Highlights:

- Designed and implemented RESTful endpoints following a consistent API structure.
- Applied a component-oriented architecture to support modular development and maintainability.

Technology stack:

PHP · MySQL

IranServer Domain Registration API

A Laravel-based domain registration service developed as a microservice for IranServer's Gate API, integrating domain registration workflows with the platform's gateway infrastructure.

Highlights:

- Developed RESTful API endpoints for domain registration workflows.
- Implemented asynchronous processing using queue and scheduling mechanisms.

Technology stack:

PHP · Laravel · MySQL · Redis

Professional Experience

Web Engineer | PersianHotel | Tourism | Freelance | Mashhad | June 2026 - Sep 2026

Restored and stabilised a legacy web application following a major server failure, then improved its performance, reliability, and operational visibility.

Key Responsibilities & Contributions:

- Recovered and reconfigured the application environment using an outdated backup following a major server failure.
- Diagnosed and resolved legacy application bugs to restore system functionality.
- Optimised caching mechanisms and SQL queries to improve application performance.
- Offloaded computationally intensive search operations to Web Workers, keeping the browser's main thread responsive.
- Designed and implemented a custom logging/monitoring system (using a service worker) to improve diagnostics and troubleshooting.

Achievements:

- Restored a previously non-functional production application from a several-year-old backup and established custom logging infrastructure for ongoing diagnosis and maintenance.
- Improved search processing efficiency through background execution and optimised database queries.

Technologies & Skills:

Web Workers · Service Workers · Backend & Frontend Caching · Application Recovery · Custom Logging

Senior PHP Engineer | Tcharter | Tourism | Full-time | Mashhad | May 2025 - May 2026

Developed and maintained backend features while improving code quality and system design within an Extreme Programming (XP) environment.

Key Responsibilities & Contributions:

- Led backend architecture and development for ICR and its API.
- Designed RESTful APIs and modular services for internal systems and external partners.
- Improved system scalability, reliability, and long-term maintainability.
- Streamlined travel agency workflows and partner integrations.

Achievements:

- Optimised SQL queries and refactored the legacy PHP search algorithm, reducing response time from 40 seconds to 2 seconds.
- Refactored legacy utility-based business logic into a domain-oriented structure aligned with Domain-Driven Design (DDD) principles.

Technologies & Skills:

XP Software Development · Domain-Driven Design (DDD) · PHP-CS-Fixer

Web Developer | RHSPASU | Other | Full-time | Mashhad | Nov 2023 - Mar 2025

Developed an HMVC PHP application for HR management with flexible fields, unlimited reports and structured data.

Key Achievements:

- Built flexible reporting and statistical modules.
- Delivered the project under strict network restrictions and limited infrastructure.

Technologies & Skills:

MongoDB · Design Patterns

Senior Back-End Engineer | KimiaDP | Software | Full-time | Mashhad | Jun 2022 - Oct 2023

Led a team of eight developers and designers in building a SaaS website builder using Laravel and WordPress, applying rapid application development (RAD) and prototyping.

Key Responsibilities & Contributions:

- Led backend and frontend architecture and development for commercial products.
- Designed microservices and WordPress plugins to integrate WordPress with SaaS applications.
- Developed prototypes and maintained existing products.
- Implemented GitOps-based CI/CD workflows and development infrastructure.

Key Achievements:

- Standardised the development process through prototyping, increasing development speed by approximately 1.5x.
- Standardised the design process by establishing shared design principles, reducing design time by approximately 30%.

Technologies & Skills:

RAD · GitOps · DevOps · ADR · TDD · Psalm · PHPStan · Node.js · Sass · TypeScript · Gulp

Senior Back-End Engineer | RayaPars | Software | Freelance | Mashhad | Nov 2021 - Apr 2022

Re-engineered the legacy RayaPars CMS using Symfony, introducing a modular, component-oriented architecture and developing core application components.

Key Responsibilities & Contributions:

- Rebuilt the company's CMS using Symfony and Docker.
- Designed a modular architecture to improve extensibility.
- Applied a component-oriented approach to software development.

Key Achievements:

- Introduced unit testing practices, helping reduce bugs and support tickets.
- Improved code quality and deployment reliability.

Technologies & Skills:

Symfony · Component Oriented Programming (COP) · Modular Design

Senior Back-End Developer | IranServer | Software | Full-time | Mashhad | May 2021 - Oct 2021

Developed, documented, and refactored RESTful APIs and WHMCS plugins.

Key Responsibilities & Contributions:

- Developed RESTful APIs using Laravel.
- Produced technical documentation for backend components.
- Applied SOLID principles to improve code structure and maintainability.

Key Achievements:

- Developed WHMCS modules and RESTful APIs following SOLID principles.
- Delivered maintainable backend components for hosting and billing systems.

Technologies & Skills:

WHMCS · Laravel · Docker · Git · Scrum · PHPUnit · Microservices · Design Patterns · SOLID Principles

Back-End Developer | RayaPars | Software | Full-time | Mashhad | Jul 2020 - Apr 2021

Developed websites using RayaPars CMS, customising functionality to meet individual clients' business requirements.

Achievements:

- Developed a modular page builder for RayaPars CMS.
- Reduced project delivery time and increased team capacity by approximately 15%.

Technologies & Skills:

RESTful APIs · Team Collaboration

Back-End Developer | PersianHotel | Tourism | Full-time | Mashhad | Apr 2019 - Jun 2020

Rebuilt a legacy Joomla-based system using a custom PHP MVC architecture.

Highlights:

- Migrated a legacy Joomla system to a custom MVC-based PHP architecture.
- Improved critical backend performance by approximately 8× and reduced main-page load times by approximately 3×.

Technologies & Skills:

Object-Oriented Programming (OOP) · Bootstrap · SWOP APIs

PHP Developer | Software | Freelance | Mashhad | Oct 2016 - Mar 2019

Developed PHP solutions for clients and organisations through freelance engagements.

Highlights:

- Delivered PHP and WordPress backend projects for clients.
- Developed custom applications, plugins, and themes.

Technologies & Skills:

PHP · JavaScript · CSS · MySQL · WordPress · Matlab · VB.NET

Technical stack

Category	Technologies
Programming Languages	PHP, JavaScript, SQL, C
Backend & Platforms	Laravel, Symfony, WordPress, WHMCS
Architecture & Practices	OOP, Design Patterns, SOLID, DDD, TDD, Modular Architecture
APIs & Integration	REST, JSON, HTTP
Database	MySQL, MariaDB, MongoDB, Redis
Frontend	HTML, Pug, CSS, Sass, TypeScript, jQuery
Testing & Code Quality	PHPUnit, Psalm, PHPStan, PHP-CS-Fixer
Development Tools	Git, GitHub, Linux, Docker
Build & Dependency Tools	Composer, Node.js, Gulp

Education

PhD in Agricultural Economics

Specialisation: Production Economics and Management

Ferdowsi University of Mashhad . 2023
